

Danil Ten

Seoul, South Korea | +82-10-2571-0804 | sjeon7198@gmail.com | linkedin.com/in/danilten | github.com/danil123zxc

PROFESSIONAL SUMMARY

AI Engineer with production experience shipping agent workflows, backend APIs, and evaluation systems end-to-end. Strong in Python, FastAPI, REST integrations, RAG pipelines, and rapid iteration on live AI systems using metrics. Comfortable translating ambiguous product needs into working software and supporting regular overlap with US time zones.

EDUCATION

B.S. Computer Engineering - Kyungnam University, Changwon, South Korea	2023-2026
Software Engineering - RTU MIREA, Moscow, Russia	2020-2022

WORK EXPERIENCE

TripleH	Mar 2026 - Present
----------------	--------------------

AI Engineer - Seoul, South Korea

- Built and maintained 6+ autonomous AI agents on a cloud-native platform, enabling users to create, configure, and run production workflows across real operating needs.
- Engineered 15+ FastAPI and REST API endpoints for agent configuration, execution, and lifecycle management, with scalable PostgreSQL and SQLAlchemy service layers behind them.
- Improved RAG pipeline quality by ~10% in Hit@5 recall through chunking, embedding, and reranking optimization, then reduced agent error rate by ~20% through prompt iteration.
- Designed LLM-as-a-Judge evaluation systems across 10+ agent workflows and shipped within a 7-person international team using Docker, CI/CD, and code review practices.

Ebit	Jan 2026
-------------	----------

AI Benchmarking Inspector - Seoul, South Korea (contract)

- Integrated Terminal-Bench and LLM-as-a-Judge pipelines into GitHub Actions CI/CD, reducing manual benchmarking time by ~65% on real terminal tasks.
- Built 5 automation scripts for static analysis, formatting, and smoke-test checks, replacing manual QA gates with repeatable engineering workflows.

DeepLearning.AI	Jul 2025 - Jan 2026
------------------------	---------------------

Alpha Tester - Remote

- Validated AI/ML platform features and course workflows in production, identifying and documenting 30+ reproducible bugs and contributing targeted fixes to notebooks and platform code.

PROJECTS

JobHunt AI - Full-Stack AI Workflow Product

Built an AI job-search assistant with LangChain, LangGraph, FastAPI, Next.js, and Supabase to analyze job posts, optimize resumes, and generate structured outputs from real workflow inputs. Deployed on Vercel with authentication, HTTPS, and a production-ready backend/frontend split. github.com/danil123zxc/resume-agent

ADDITIONAL

Core: Python, JavaScript, FastAPI, REST APIs, JSON payloads, workflow automation

AI Systems: LLM agent development, RAG pipelines, prompt optimization, LLM-as-a-Judge, LangChain, LangGraph

Backend and DevOps: PostgreSQL, SQLAlchemy, microservices, Docker, CI/CD, GitHub Actions, AWS, Azure

Languages: Russian (Fluent), English (Fluent), Korean (Business)

Work Authorization: F-4 visa - no sponsorship required in Korea

Availability: Open to regular overlap with US time zones
